

**2024 ANNUAL DRINKING  
WATER QUALITY REPORT  
(Consumer Confidence Report)  
January 1, 2024 -----December 31, 2024  
ARMSTRONG WATER SUPPLY CORPORATION**

Phone Number: 254-657-2429  
PWS ID NUMBER 0140019

OUR DRINKING WATER IS REGULATED

This report is a summary of the quality of the water we provide our customers. The analysis was made by using the data from the most recent U.S. Environmental Protection Agency (EPA) required tests and is presented in the attached pages. We hope this information helps you become more knowledgeable about what's in your drinking water.

---

PUBLIC PARTICIPATION OPPORTUNITIES

DATE: 1<sup>st</sup> Tuesday of each month  
TIME: 6:00 pm  
LOCATION: 100 East Travis St.-Holland, Texas  
PHONE NUMBER: 254-657-2429

To learn about future public meetings (concerning our drinking water), or to request to schedule one please call us,

---

SOURCES OF DRINKING WATER

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk.

Contaminants that may be present in source water include:

- Microbial contaminants- such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water run-off, industrial or domestic wastewater discharges, oil and gas production, mining or farming
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff and residential uses-
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities. Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the systems business office. SPECIAL NOTICE

You may be more vulnerable than the general population to certain microbial contaminants, such as *Cryptosporidium*, in drinking water. Infants, some elderly or immunocompromised persons, such as those undergoing chemotherapy [Or cancer, those who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care provider. Additional guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* are available from the Safe Drinking Water Hotline at (800)426-4791.

**Required Additional Health Information for Lead**

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. This water supply is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

En Espanol

Este informe incluye informacion importante sobre el agua para tomar. Para asistencia en espanol, tuvor de llamar al teletono (254)657-2429.

## Information about Source Water Assessments

No Source Water Assessment for your drinking water source(s) has been conducted 1m: the TCEQ for your water system. The report describes the susceptibility and the types of constituents that may come into contact with your drinking water source based on human activities and natural conditions. The information in this assessment will allow us to focus our source water protection strategies.

For more information about your sources of water, please refer to the Source Water Assessment Viewer available at the following URL:<http://www.tceq.texas.gov/gis/swaview>

Further details about sources and source-water assessments are available in Drinking Water Watch at the following URL:<http://dww2.tceq.texas.gov/DWW>

For more information on source water assessments and protection efforts at our system, contact Billy James Smith at 254-657-2429

<u>Source Water Name</u>	<u>Type of Water</u>	<u>Location</u>
SW from Central Texas WSC CC from TX0140161 CT W SC	Surface Water	Stillhouse Hollow Lake
12901 FM 1123/Standpipe Plant	Ground Water	12901 FM 1123 Well

---

### ALL drinking water may contain contaminants

When drinking water meets federal standards, there may not be any health benefits to purchasing bottled water or point of using devices. Drinking water, including bottled water, may reasonable be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily -indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline 1-800-426-4791.

---

### Secondary Constituents

Many constituents (such as calcium, sodium, or iron) which are often found in drinking water, can cause taste, color, and odor problems. The taste and odor constituents are called secondary constituents and are regulated by the State of Texas, not the EPA. These constituents are not causes for health concern. Therefore, secondaries are not required to be reported in this document, but they may greatly affect the appearance and taste of your water.

---

### Water Quality Test Results

Definitions	The following tables contain scientific terms and measures, some of which may require an explanation.
Action Level	The concentration of a contaminant which, if exceeded triggers treatment or other requirements which a water system much follow.
Action Level Goal (ALG)	The level of a contaminant in drinking water below which there is no known risk to health. ALGs allow for a margin of safety.
Avg:	Regulatory compliance with some MCLs are based on running annual average of monthly samples.
Level 1 Assessment	A Level 1 assessment is a study of the water system to identity potential problems and determine (if possible) why total coliform bacteria have been found in our
Level 2 Assessment	water system. A level 2 assessment is a very detailed study of the water System to identify potential problems and determine (ir possible) why an Ecoli MCI. violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions. The level of a contaminant in drinking water below which there is no kn01rn or expected risk to health. MCLG•sallow for a margin of safety.
Maximum Contaminant Level Goal or MCLG: Maximum Contaminant Level or MCL:	The highest level of contaminant that is allowed in drinking water. MCL •s are set as close to the MCLG's as feasible using the best available treatment technology The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
Maximum residual disinfectant level or MRDL:	million fibers per liter (a measure of asbestos)
Maximum residual disinfectant level or MRDLG	The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants. Not applicable
na:	Nephelornetric turbidity units (a measure of turbidity)
pCi/	Picocuries per liter (a measure of radioactivity)
ppb:	Micrograms per liter or parts per billion-or one ounce in 7,350,000 gallons of
ppm:	water Milligrams per liter or pans per million-or one ounce in 7.350 gallons
ppq	ohntcr Parts per trillion. or nanograms per liter (ng/L) parts per quadrillion, or picograms per liter (pg/L)
Treatment Technique or IT	Million fibers per liter (a measure of asbestos) A required process intended 10 reduce the level or a contaminant in drinking water.

## Inorganic Contaminants

Collection Date	Contaminant	Highest Level	Range of Levels	MCLG	MCL	Units	Violation	Likely Source of Contamination
		Detected	Detected					
2024	Fluoride	3.45	2.34-2.45	4	4	ppm	N	Erosion of natural deposits; water additive which promotes strong teeth discharge from fertilizer & aluminum factories
2024	Nitrate (Measured as Nitrogen)	0.2	0-0.2	10	10	ppm	N	Runoff from fertilizer use; leaching from septic tanks, sewage; Erosion of natural deposits
2024	Barium	0.0325	0.325	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
2024	Selenium	0.003	0.003	50	50	ppb	N	Discharge from petroleum & metal refineries; Erosion of Natural deposits; Discharge- mine
2024	Cyanide	0.01	0.01	200	200	ppb	N	Discharge from plastic & fertilizer factories; Erosion of Natural deposits; Discharge/mines
2024	Chromium	0.0 0.01	0.0-0.01	100	100	ppb	N	Discharge from steel and pulp mills; Erosion of natural deposits

\*\*\* Nitrate advisory-Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant, you should ask advice from your health care provider.

## Maximum Residual Disinfectant Level

Year	Disinfectant	Average Level	Minimum Level	Maximum Level	MRDL	MRDLG	Unit of Measure	Violation	Likely source of contamination
2024	Chlorine and Chloramines	2.14	0.50	4.0	4	4	ppm	N	Water additive used to control microbes.

## Regulated Contaminants

Year	Disinfectants and Disinfectant ByProducts	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
2024	Haloacetic Acids (HAA5)	19.1	0-19.1	No goal for The total	60	ppb	N	Water additive used to control microbes
2024	Trihalomethanes	31.2	0-31.2	No goal for The total	80	ppb	N	Byproduct of drinking water chlorination

The value in the Highest-Level Detected column is the highest average of all TTHM and HAA5 sample results collected at location over a year

## Unregulated Contaminants

Unregulated contaminants are those for which the EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.

Year or Range	Contaminant	Average Level	Minimum Level	Maximum Level	Unit of Measure	Source of Contaminant
2024	Chloroform	22.2	1.2	1.1	ppb	Byproduct of drinking water disinfection.
2024	Bromoform	14.4	1.2	8.5	ppb	Byproduct of drinking water disinfection.
2024	Bromodichloromethane	23.5	1.1	9.6	ppb	Byproduct of drinking water disinfection.
2024	Dibromochloromethane	16.3	1	7	ppb	Byproduct of drinking water disinfection.

## Radioactive Contaminants

Year Contaminant	Highest Level Range of Individual MCLG MCL Units Violation		Likely Source of contamination	
	Detected	Samples		
2024 Beta/photon emitters	5.8	0-5.8	O 50 pCi/L*	N Decay of natural & man-made deposits.
*EPA considers 50 pCi/L to be the level of concern for beta particles.				
2024 Combined Radium 226/228	1.57	0-1.57	0 5 pCi/L	N Erosion of natural deposits.
2024 Gross alpha excluding radon & uranium	5.3	4.6-4.6	0 15 pCi/L	N Erosion of natural deposits.

## Coliform Bacteria

Max Contaminant Level Goal	Total Coliform Maximum Contaminant	Highest No. of Positive Fecal Coliform or E.Coli	Total No. of Positive E. Coli Max-Contaminant Level	Violation	Likely Source Present in the environment
0	0	0	0	N	

## Regulated Contaminants Detected

### Lead and Copper

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health.

ALGs allow for a margin of safety.

Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Lead and Copper Date Sampled MCLG Action Level 90th Percentile # Sites Over AL Units Violation Likely Source of Contamination

Copper	07/26/2023	1.3	1.3	0.18	0	ppm	N	Erosion of natural deposits Leaching from wood preservatives; Corrosion of household plumbing systems
Lead	07/26/2023	0	15	3.91	0	ppb	N	Corrosion of household Plumbing systems; Erosion of Natural deposits

## Violations Table

There were no violations for Armstrong Water Supply Corporation for the year 2022

In the water loss audit submitted to the Texas Water Development Board for the time period of Jan-Dec,2023, our system lost an estimated 25,190,588 gallons of water. If you have any questions about the water loss audit, please call 254-657-2429.
